

Bilkent University

Department Of Computer Engineering

Bilkent Information Office Web Page

CS-319 Section 1

Group 2

Final Report

23.12.2024

Instructor: Eray Tüzün

Teaching Assistant: Yahya Elnouby

Group Members:

Name	ID
Ayça Candan Ataç	22203501
Elif Ceren Çelik	22202534
Elif Ece Can	22201800
Emre Furkan Akyol	22103352
Mustafa Özkan İr	22103267
Ahmet Yağız Sarıdoğan	22202072

Elif Ceren Çelik:

- General UI design for all views and home page design for Information office with some exceptions that were specific to some teammates (like guide rankings)
- The backend and frontend of the Analytics page
- UI Controllers that return views and models passed into the view. Added mappings for all the views for safe navigation. API methods used in views
- Sequence and Subsystem decomposition diagram
- To-do list logic and page for user tasks and calendar implementation for events using Javascript Libraries

Ahmet Yağız Sarıdoğan:

- Data retrieval from YOKAtlas and integration into the database
- Integrated Thymeleaf as the templating engine to render server-side views.
- Sequence and Subsystem decomposition diagram
- General UI design for all views and home page design for Information office with some exceptions that were specific to some teammates (like guide rankings)

Emre Furkan Akyol:

- The core Postgres database structure created for the parent Events and their inherited children (Tour, Individual Tour, Fair) and the Advisor class.
- Integrated the Day Filter and Search by School Name features in all actors' events.
- Notification System, Fair and Fair Application tables and their backend implemented.
- Worked on Use Case Diagram, Top 2 Design Goals, Non-Functional Requirements, Helped Class Diagram.

Elif Ece Can:

- Create the core structure for the User parent class and its children classes (Guide, GuideInTraining, Coordinator etc.)
- Backend and frontend implementations of guide related features: guide schedule, guide rankings, to-do list, and event records of guides, incident reports
- General backend and frontend support for application errors and in conflicts.
- Worked in D1 requirements, D2 class, activity and state diagrams, D4 enhanced class diagram with Ayça Ataç.

Ayça Candan Ataç

- Implemented authentication, authorization and mail services
- Implemented all user operations (register, login, change role, change password, edit profile)
- Helped frontend and backend linking by creating controllers, helped frontend design
- Worked in D2 class, activity and state diagrams, D4 enhanced class diagram with Elif Ece Can.

Mustafa Özkan İr

- Google Sheets API Integration for event applications.
- Full-stack implementation of event tables (Tour, Fair, and Individual Tour) for all users.
- Worked in use-case diagram, detailed class diagram, non-functional requirements, design patterns, mockups and designed cover page for all deliverables.

Build Instructions

1. Install PostgreSQL and pgAdmin4
 - Download and install PostgreSQL and pgAdmin4 from their official websites.
2. Clone the Repository from GitHub:
 - git clone <https://github.com/eececan/CS319-1-Project.git>
3. Open the source code in your preferred IDE
4. Configure Database Settings
 - Update the `application.properties` file to match your existing database configuration, or create a new database with the following properties listed in our `application.properties` file:
 - `spring.datasource.url=jdbc:postgresql://localhost:5432/`
 - `spring.datasource.username=postgres`
 - `spring.datasource.password=password`
5. Run the Application Twice
 - From the IDE, simply run the application twice to initialize data. The first run will initialize the roles, and the second run will initialize the default users.
6. Configure Mail Services (Optional)
 - If you want to change the email address that sends the application/rejection/cancellation mails, you can configure the settings in `application.properties` file:
 - `spring.mail.username=<your login user to smtp server>`
 - `spring.mail.password=<your login password to smtp server>`
 - If not, make sure `application.properties` looks like this:
 - `spring.mail.username=btoservice@gmail.com`
 - `spring.mail.password=qbie hzgf eesz wkfj`

7. Access the Application

- Enter <http://localhost:8080/home> to your browser after running the application.

8. Using the Default Users

- You can login with the default users:

Coordinator:

ID: 22200000

Password: Password123!!!

Director:

ID: 22

Password: Password123!!!

Head Secretary:

ID: 222

Password: Password123!!!

- And can register new users by logging in with the Coordinator account and go to Members>Add New User
